Environmental Noise Feasibility Study

245 Riverbank Drive

Proposed Residential Development

City of Cambridge

EXECUTIVE SUMMARY

Valcoustics Canada Ltd. (VCL) has been retained to prepare an Environmental Noise Feasibility Study for the proposed residential development at 245 Riverbank Drive in support of the Official Plan Amendment (OPA) and Zoning By-law Amendment (ZBA) application submissions to the City of Cambridge.

The illustrative development concept that is included in the planning applications consists of seven blocks of 2-storey street townhouses and four blocks of 3-storey stacked townhouses. In this concept, the street townhouses will have grade-level rear yard outdoor amenity spaces. All residents will also have access to a common outdoor amenity area at the centre of the site.

The stationary source in the vicinity with the potential to impact the proposed development is the future industrial development along Intermarket Road, which is under the same ownership as the subject site. This development will consist of three buildings. Block 1 (the northernmost building) is starting construction in spring/summer 2024. Blocks 2 and 3 (the buildings adjacent to the subject site) are still in the preliminary planning stages. The main noise sources associated with all three buildings will be the truck movements on site as they travel to and from the loading docks and bays, as well as the rooftop mechanical units.

There are no transportation noise sources in the vicinity that are expected to have a significant impact on the subject site.

To meet the applicable Class 1 stationary source noise guideline limits, a sound barrier along the west property line of Blocks 2 and 3 of the industrial site is required. The sound barrier heights will depend on the final grading and site plans for both the residential and industrial sites. The specific sound barrier requirements should be determined as part of the land use approvals process for the industrial buildings to be located on Blocks 2 and 3.

1.0 INTRODUCTION

VCL was retained to prepare an Environmental Noise Feasibility Study to address the potential noise impact from the environment onto the proposed residential development. The potential sound levels and noise mitigation measures needed for the proposed development to comply with the MECP noise guideline requirements are outlined herein.

1.1 SITE LOCATION AND SURROUNDING AREA

The subject site is located at 245 Riverbank Drive, to the southwest of the intersection of Allendale Road and Riverbank Drive in the City of Cambridge. The overall development area is bounded by:

- Existing detached residential dwellings to the north and west;
- Future industrial development at 200 Intermarket Road to the east; and
- Future industrial development (currently agricultural land) to the south.

A Key Plan is included as Figure 1.

This report was completed using the Grading Plan, prepared by EXP Services Inc., last revised March 1, 2024. The Grading Plan is included as Figure 2.

1.2 THE ILLUSTRATIVE DEVELOPMENT CONCEPT

The development concept consists of seven blocks of 2-storey street townhouses and four blocks of 3-storey stacked townhouses. The street townhouses will have grade-level rear yard outdoor amenity spaces. The stacked townhouses are expected to have small private balconies or terraces. They will not have grade-level outdoor amenity space. All residents will have access to a common outdoor amenity area at the centre of the site.

2.0 NOISE SOURCES

2.1 TRANSPORTATION NOISE SOURCES

The roadways in the area are either far enough removed from the site or are anticipated to have low traffic volumes such that they are not expected to impact the proposed development. The Canadian Pacific Railway rail line to the south is more than 500 m from the subject site. It will also be screened by the intervening industrial development once it is completed. Thus, there are no transportation noise sources in the vicinity that are expected to impact the proposed development.

2.2 STATIONARY SOURCES

The MECP definition of a stationary source indicates that it is a source of noise that is included and normally operated within the property lines of a facility. Industrial and commercial facilities are considered stationary sources. Stationary sources are to be assessed separately from transportation noise sources under the MECP guidelines.

The stationary source with the potential to impact the proposed development is the future industrial development on Intermarket Road. This development will consist of three buildings. Block 1 (the northernmost building) is starting construction in spring/summer 2024. Blocks 2 and 3 (the buildings adjacent to the subject site) are still in the preliminary planning stages but are expected to be similar to Block 1. The main noise sources associated with all three buildings will be the truck movements on site as they travel to and from the loading docks and bays, as well as the rooftop mechanical units.

It is understood that the agricultural land to the south of the site will be redeveloped with industrial uses in the future. However, there are currently no development plans for these lands. Any future developments will need to be designed to comply with the sound level limits set out in guideline NPC-300 at the neighbouring noise sensitive receptors, including the subject site. Thus, these future uses have not been considered further in this assessment.

Due to setback distance and/or screening from the future industrial buildings at 200 Intermarket Road, the other existing and future commercial/industrial uses farther to the east and southeast are not expected to have a significant impact at the subject site. Thus, these facilities have not been considered further in this assessment.

3.0 ENVIRONMENTAL NOISE GUIDELINES

The noise guidelines for new residential developments are in MECP Publication NPC-300. The requirements are discussed below and are summarized in Appendix A.

The sound level limits for stationary sources are expressed in terms of the one-hour equivalent sound level $L_{eq,\ 1hr}$ (dBA). The hourly limit varies depending on the time period and the ambient noise environment of the area.

3.1.1.1 Class 1 Area

The subject site is in an urban area where man made sounds dominate the ambient sound environment 24 hours per day. This is defined as a Class 1 area by the MECP guidelines. The applicable limits for Class 1 areas are the higher of the ambient noise (primarily due to road traffic) or the exclusion limits. The exclusion limits for a Class 1 area are:

- 50 dBA during the daytime (0700 and 1900 hours) and evening (1900 and 2300 hours) at the exterior of a window to a noise sensitive space and at an outdoor point of reception; and
- 45 dBA during the nighttime (2300 and 0700 hours) at the exterior of a window to a noise sensitive space.

Noise sensitive spaces within the proposed residential development are the living and sleeping quarters. There are no indoor sound level limits for stationary sources. Balconies or elevated terraces are not outdoor points of reception where the guideline limits must be met unless they are the only outdoor living area for the occupant, have a minimum depth of 4 m and are not enclosed.

The guidelines require that the assessment determine the predictable worst-case noise impact. The predictable worst-case is when the difference between the sound level from the stationary source and the MECP guideline limit is greatest.

3.1.2 Applicable Guideline Limits

The exclusion limits were used for all receptors in the analysis since they are higher than the existing minimum ambient due to road traffic.

4.0 NOISE IMPACT ASSESSMENT

4.1 NOISE SOURCES AND OPERATING SCENARIOS

4.1.1 Block 1

VCL previously prepared a Noise Impact Study, dated November 30, 2020, and an updated Noise Impact Study, dated April 22, 2021, in support of the Site Plan Approval (SPA) application submission for Block 1 of the industrial development at 200 Intermarket Road. The noise sources and operating scenarios from the 2021 report were used in this assessment. The descriptions of the noise sources and operating scenarios are provided below.

4.1.1.1 Truck Activity

- Four tractor trailers could arrive and depart the loading docks at Block 1 during the worst-case hour, during the daytime and evening (0700 to 2300) periods.
- Four medium-sized trucks could arrive and depart the loading bays at Block 1 during the worst-case hour, during the daytime and evening (0700 to 2300) periods.
- Trucks will not idle their engines for extended periods during loading/unloading. However, to account for any incidental idling or manoeuvring that may occur during arrival or departure, 10 minutes of idling per truck was included in the assessment.
- Refrigerated trucks will not operate on the site.
- There is no truck activity on site or at the loading docks during the nighttime (2300 to 0700).
- Half of the trucks will arrive at the loading area using the driveway from Allendale Road at the northwest corner of the site and depart to Intermarket Road using the driveway at the southeast corner of the site. The remaining half of the trucks will arrive using the driveway from Intermarket Road and depart using the driveway to Allendale Road.
- Trucks will not uncouple their trailers for loading or unloading (i.e., they will remain coupled to the trailer for the entire time the trailer is at a loading bay).
- Forklifts will not be used for loading or unloading.
- There will be no impulsive sounds, such as from a forklift or pallet jack travelling across a dock leveller, associated with truck loading or unloading. Loading/unloading will be done by hand.
- With the exception of vehicle movements, all activities associated with the tenant operations will occur inside the building. Exterior doors will be kept closed except during loading/unloading.
- There will be two outdoor garbage compactors. The compactors will be located at the north and south ends of the loading areas. Each compactor will operate for a maximum of 5 minutes/per hour during the busiest daytime/evening hour. The compactors will not operate during the nighttime hours.

4.1.1.2 Rooftop Mechanical Equipment

- There is a possibility of up to 10 HVAC units serving the office areas. The exact number of HVAC units is unknown at this time and will be confirmed once leases are signed with tenants.
- The HVAC units will be located approximately 8 m from the west (front) facade of the building.
- The units will be 6-ton Lennox Energence units.
- There will be no other rooftop mechanical units that have a significant sound emission level.

The HVAC units were modelled using manufacturer's sound data. The heights of the units were assumed to be 1.8 m above the top of the roof to account for assumed 24" roof curbs.

4.1.2 Blocks 2 and 3

Blocks 2 and 3 are in the preliminary planning stages. There are currently no plans available for these blocks. It is understood that the uses at these two blocks are expected to be very similar to Block 1. Thus, to complete a preliminary assessment of the noise impact from Blocks 2 and 3 onto the proposed development, the noise sources and operating times from Block 1 were applied to these blocks. Note, for these two blocks, the trucks were assumed to arrive from and depart using driveways to the north and south of each building.

The noise sources and the operating times for the three blocks are summarized in Table 1.

TABLE 1 NOISE SOURCE SUMMARY

Source ID[1]	Source Description	Sound Power Level (dBA)	Source Height (m)[2]	Operating Times	
				Daytime / Evening (0700 to 2300)	Nighttime (2300 to 0700)
Block 1					
B1_HTIdle01 to B1_HTIdle04	Heavy truck engine idling	101 (each)	2.4	10 min/hr (each)	0 min/hr
B1_MTIdle01 to B1_MTIdle04	Medium truck engine idling	97 (each)	1.5	10 min/hr (each)	0 min/hr
B1_RTU01 to B1_RTU10	6-ton rooftop HVAC units	81 (each)	1.8[3]	60 min/hr (each)	30 min/hr (each)
B1_HTMove	Heavy truck movement at 20 km/h	106 (each truck)	2.4	4 movements/hr	No activity
B1_MTMove	Medium truck movements at 20 km/h	100 (each truck)	1.5	4 movements/hr	No activity
B1_Compactor1 and B1_Compactor2	Garbage compactors	89	2.0	5 min/hr (each)	0 min/hr

…/cont'd

TABLE 1 NOISE SOURCE SUMMARY (continued)

Source ID(1)	Source Description	Sound Power Level (dBA)	Source Height (m)(2)	Operating Times	
				Daytime / Evening (0700 to 2300)	Nighttime (2300 to 0700)
Block 2					
B2_HTIdle01 to B2_HTIdle04	Heavy truck engine idling	101 (each)	2.4	10 min/hr (each)	0 min/hr
B2_MTIdle01 to B2_MTIdle04	Medium truck engine idling	97 (each)	1.5	10 min/hr (each)	0 min/hr
B2_RTU01 to B2_RTU10	6-ton rooftop HVAC units	81 (each)	1.8(3)	60 min/hr (each)	30 min/hr (each)
B2_HTMove	Heavy truck movement at 20 km/h	106 (each truck)	2.4	4 movements/hr	No activity
B2_MTMove	Medium truck movements at 20 km/h	100 (each truck)	1.5	4 movements/hr	No activity
B2_Compactor1 and B2_Compactor2	Garbage compactors	89	2.0	5 min/hr (each)	0 min/hr
Block 3					
B3_HTIdle01 to B3_HTIdle04	Heavy truck engine idling	101 (each)	2.4	10 min/hr (each)	0 min/hr
B3_MTIdle01 to B3_MTIdle04	Medium truck engine idling	97 (each)	1.5	10 min/hr (each)	0 min/hr
B3_RTU01 to B3_RTU10	6-ton rooftop HVAC units	81 (each)	1.8(3)	60 min/hr (each)	30 min/hr (each)
B3_HTMove	Heavy truck movement at 20 km/h	106 (each truck)	2.4	4 movements/hr	No activity
B3_MTMove	Medium truck movements at 20 km/h	100 (each truck)	1.5	4 movements/hr	No activity
B3_Compactor1 and B3_Compactor2	Garbage compactors	89	2.0	5 min/hr (each)	0 min/hr

Notes:

(1) See Figure 3 for source locations.

(2) Source heights are relative to grade unless otherwise stated.

(3) Relative to the top of the roof.

4.2 ANALYSIS METHOD

A 3-D acoustic model of the proposed facility was developed to predict the sound levels at the residential points of reception from the rooftop mechanical equipment and activity at the loading areas. The model was developed using the CadnaA v2023 MR1 environmental noise modelling software, which implements the protocols of ISO Standard 9613-2, "Acoustics – Attenuation of Sound During Propagation Outdoors". Two orders of sound reflection were included in the analysis. Hard ground (G = 0.0) was used to model paved areas. Soft ground (G = 1.0) was used elsewhere.

The proposed grading at Block 1 was taken from the Grading Plan, prepared by EXP Services Inc., received October 30, 2020. The proposed grading for the subject site was taken from the Grading Plan, prepared by EXP Services Inc., last revised March 1, 2024. Future grading plans for Blocks 2 and 3 have not yet been developed. Intermarket Properties has stated that Blocks 2 and 3 are currently planned to have a finished floor elevation of 309.6. The entire site areas for Blocks 2 and 3 have therefore been modelled at an elevation of 309.6. The analysis should be updated once the future site grading is available.

Note, the noise study for Block 1 recommended a 2.4 m high acoustic fence along the west property line. This sound barrier was included in the model.

The sound levels at the plane of windows (POWs) were assessed using the Building Evaluation feature in CadnaA, which calculates the sound levels at each storey, at locations around the building facades. The sound levels at the outdoor points of reception (OPORs) were assessed using the Grid feature in CadnaA. Point receptors were used to represent the worst-case locations. The point receptors shown in this analysis are:

- POW_1 to POW_3 – representing the top storey plane of windows at the 2-storey street townhouses. The receptors were assessed at a height of 4.5 m above grade.
- POW_4 and POW_5 – representing the top storey plane of windows at the 3-storey stacked townhouses. The receptors were assessed at a height of 7.5 m above grade.
- OPOR_1 to OPOR_3 – representing the outdoor points of reception at the street townhouses. The receptors were assessed at a standing height of 1.5 m above grade.

See Appendix B for a sample calculation.

4.3 PREDICTED SOUND LEVELS

Figure 4 and Table 2 show the predicted sound levels at the neighbouring noise sensitive receptors due to the noise sources at Block 1 alone.

Figure 5 and Table 2 show the predicted sound levels at the neighbouring noise sensitive receptors due to the noise sources at Blocks 1, 2 and 3 together.

As shown on the figure and in the table, the sound levels due to Block 1 alone are predicted to be within the Class 1 guideline limits. The sound levels due to all three blocks together are predicted to exceed the applicable noise guideline limits at the subject site. Thus, mitigation measures will need to be included as part of the design and construction of Blocks 2 and 3.

TABLE 2 UNMITIGATED SOUND LEVELS DUE TO INDUSTRIAL DEVELOPMENT NOISE SOURCES

Receptor[1]	Predicted One Hour L_{eq} (dBA)				Applicable Guideline Limit (dBA)[2]	
	Due to Block 1		Due to Blocks 1, 2 and 3			
	Daytime/Evening (0700 to 2300)	Nighttime (2300 to 0700)	Daytime/Evening (0700 to 2300)	Nighttime (2300 to 0700)	Daytime/Evening (0700 to 2300)	Nighttime (2300 to 0700)
OPOR_1	48	-	61	-	50	-
POW_1	47	29	60	33	50	45
OPOR_2	31	-	53	-	50	-
POW_2	33	19	52	30	50	45
OPOR_3	34	-	51	-	50	-
POW_3	41	24	57	29	50	45
POW_4	45	28	58	34	50	45
POW_5	42	26	58	33	50	45

Notes:

(1) See Figures 4 and 5.

(2) MECP Class 1 minimum exclusion limit.

4.4 DISCUSSION

The preliminary analysis shows that the sound levels from the industrial site could be mitigated to the applicable guideline limits using these sound barriers:

- The 2.4 m high sound barrier along the west property line of Block 1 that has been included as part of the site design;
- A 3.0 m high sound barrier along the west property line of Block 2, between the Block 1 sound barrier and the northeast corner of the subject site; and
- A 5.2 m high sound barrier along the west property lines of Blocks 2 and 3 (i.e. along the east property line of the subject site).

Figure 6 shows the sound barrier locations and the predicted sound levels at the subject site.

Notes regarding the sound barriers:

- Since the sound levels due to Block 1 alone are predicted to meet the guideline limits at the subject site, additional sound barriers (beyond the barrier already included in the design of Block 1) are not required at the industrial development until Blocks 2 and 3 are built.
- The specific sound barrier heights and locations at Blocks 2 and 3 are highly dependent on the final layouts, building heights and future grading of both the industrial and residential sites. For the illustrative development concept used in this analysis, the sound barrier height

requirement is primarily driven by the requirement to screen the top storey windows at the 3-storey stacked townhouse blocks. If these blocks are reduced to 2-storeys, the barrier height requirement would significantly decrease.

- The sound barrier requirements may also differ if the operations at Blocks 2 and 3 are different from those described above. The final sound barrier requirements should therefore be determined as part of the land use approvals process for industrial Blocks 2 and 3.
- It is understood that an opening in the sound barrier (4m to 6m in width) is required for emergency vehicles to permit a 2nd point of access to the residential area. In this regard, it may be possible to include an acoustic gate or a staggered barrier configuration that will allow emergency vehicle access while still screening the residential development. This aspect of the sound barrier design can also be addressed as part of the land use approvals process for industrial Blocks 2 and 3.

5.0 CONCLUSIONS

The analysis shows that it is feasible to meet the applicable MECP noise guidelines at the subject site. Mitigation measures will be needed at the future industrial buildings to the east. The details of the mitigation measures will be determined during the land use approvals for the industrial blocks and implemented during their construction.

Calculation Configuration

Configuration	
Parameter	Value
General	
Max. Error (dB)	0.00
Max. Search Radius (#(Unit,LEN))	2000.00
Min. Dist Src to Rcvr	0.00
Partition	
Raster Factor	0.50
Max. Length of Section (#(Unit,LEN))	1000.00
Min. Length of Section (#(Unit,LEN))	1.00
Min. Length of Section (%)	0.00
Proj. Line Sources	On
Proj. Area Sources	On
Ref. Time	
Daytime Penalty (dB)	0.00
Recr. Time Penalty (dB)	0.00
Night-time Penalty (dB)	0.00
DTM	
Standard Height (m)	301.00
Model of Terrain	Triangulation
Reflection	
max. Order of Reflection	2
Search Radius Src	100.00
Search Radius Rcvr	100.00
Max. Distance Source - Rcvr	1000.00 1000.00
Min. Distance Rvcr - Reflector	1.00 1.00
Min. Distance Source - Reflector	0.10
Industrial (ISO 9613)	
Lateral Diffraction	some Obj
Obst. within Area Src do not shield	On
Screening	Excl. Ground Att. over Barrier
	Dz with limit (20/25)
Barrier Coefficients C1,2,3	3.0 20.0 0.0
Temperature (#(Unit,TEMP))	10
rel. Humidity (%)	70
Ground Absorption G	0.00
Wind Speed for Dir. (#(Unit,SPEED))	3.0
Roads (RLS-90)	
Strictly acc. to RLS-90	
Railways (Schall 03 (1990))	
Strictly acc. to Schall 03 / Schall-Transrapid	
Aircraft (???)	
Strictly acc. to AzB
