

THE STUDY

The City of Cambridge has initiated a Municipal Class Environmental Assessment (Class EA) Study for improvements to the Queen Street Sanitary Pumping Station (SPS). The existing Queen Street SPS (refer to map) is one of the largest and oldest pumping stations within the City and receives flows from the southeast part of Hespeler. In response to a recent condition assessment and a reduction in flows due to changes in the sanitary collection system, the City is planning upgrades to improve the SPS facility operations. The study will also consider alternative siting options that can address how the SPS is integrated with adjacent land uses.

THE PROCESS

The study is being planned as a Schedule "B" project under the Municipal Class EA document. The Class EA process provides members of the public and interested parties with opportunities to provide input at key stages of the study. The study will define the problem, develop and evaluate alternative solutions, identify preferred solutions, assess impacts of the preferred solutions and identify measures to lessen any adverse impacts.

PUBLIC CONSULTATION

A Public Information Centre (PIC) is planned for this Class EA study in the Fall of 2016. City staff and AECOM will be in attendance to present feasible alternatives, answer questions and discuss the next steps in the process. Notification of the PIC will be advertised in the local community newspaper and notices mailed to residents/ businesses within the study area.

Upon completion of the study, a Project File Report will be prepared and made available for public review and comment. Information can be found on the study website at: <http://www.cambridge.ca/QueenStSanitaryPS>. Any parties that wish to comment on or to be involved in the Class EA study should indicate their interest, preferably in writing to:
