To: Property Owners, Tenants

**Re: Online Public Information Centre (PIC)
Dayton Street and Metcalfe Street Reconstruction**

The City of Cambridge is proposing to reconstruct the following streets in 2025 subject to budget approval.

- Dayton Street from Water Street North to End, and
- Metcalfe Street from Blair Road to Park Hill Road West.

The reconstruction work will involve replacing the sanitary sewer, storm sewer, watermain, curb and gutter, road and sidewalk. Sanitary and water services will also be replaced to property line. A private contractor selected through the City's public tender process will undertake the reconstruction.

Due to the COVID-19 pandemic, the City will be undertaking virtual consultation through the City's Engage Cambridge website (www.engagewr.ca/dayton-metcalfe-reconstruction). You are invited to review the proposed plans to see how they will affect your property, institution or residence. Plans will be posted until December 23rd, and comments will be accepted until then. This is your opportunity to review the project and provide your comments to City Staff and the Engineering Consultant.

In addition to the online consultation materials, enclosed for your review is a copy of the information package. Please take time to review it. We look forward to answering any questions you may have regarding the project.

If you have any questions regarding this project, please contact the undersigned.

Dayton Street Reconstruction Water Street North to End

Metcalfe Street Reconstruction Blair Road to Park Hill Road West

Information Package

December 2021

Public Information Centre

Dayton Street and Metcalfe Street Reconstruction
Public Information Centre
December 2021

What is the scope of work?

The City of Cambridge is proposing to reconstruct Dayton Street from Water Street North to End, and Metcalfe Street from Blair Road to Park Hill Road West.

Reconstruction will include:

- Replacement of the existing watermain, appurtenances and services to property line,
- Replacement of the existing sanitary sewer, appurtenances and services to property line,
- Replacement of the existing storm sewer and appurtenances, and
- Replacement of the existing roadway, curb and gutter, and sidewalk.

Are there any changes proposed to the existing streetscape?

- Dayton Street from Water Street North to End

Yes. The complete roadway including curbs, boulevards, and sidewalks will be reconstructed. The width of the existing asphalt surface is approximately 6.0m from Water Street North to the end of Dayton Street. The existing sidewalk on the north side of the road is located immediately behind the curb and is approximately 1.2m wide. The existing sidewalk on the south side of the road is approximately 1.2m in width and is separated from the existing curb by a 0.5m wide grass boulevard.

In order to meet the requirements of the Accessibility for Ontarians with Disabilities Act (AODA), sidewalk widths must be increased to a minimum width of 1.5m. However, due to the constrained width of the corridor, 1.5m wide sidewalks cannot fit on both sides of Dayton Street within the existing right-of-way without significant impact to trees, retaining walls and other landscaping features.

The proposed layout for Dayton Street includes permanent removal of the sidewalk on the north side of the street, and installation of a 1.5m wide sidewalk on the south side only with a 1.0m wide grass boulevard between the concrete curb and the sidewalk. The proposed asphalt roadway width will be maintained at 6.0m. The new sidewalk on the south side of Dayton Street will also be extended to connect to the Dan Springs Trail.

Topsoil and sod will be placed behind the new curb on the north side of the street and existing driveways and walkways will be extended to meet the new curb location.

- Metcalfe Street from Blair Road to Park Hill Road West

Yes. The complete roadway including curbs and sidewalks will be reconstructed. The width of existing asphalt surface is approximately 7.2m from Blair Road to Park Hill Road West. The existing sidewalks on both sides of the road are located immediately behind the curb and are approximately 1.2m wide.

The width of proposed sidewalk on both sides of road will be increased to 1.8m as per the Accessibility for Ontarians with Disabilities Act (AODA) and will be placed immediately behind the curb. The proposed asphalt roadway width will be decreased to 6.0m to accommodate the wider sidewalks.

Given that Metcalfe Street falls within the Dickson Hill Heritage Conservation District, the option of installing a 0.3m wide stamped concrete boulevard and 1.5m concrete sidewalk will be considered during detailed design.

Why is the City proceeding with this work?

The City of Cambridge upgrades infrastructure each year in order that aged facilities are replaced prior to there being a complete failure or the cost of maintenance becomes exorbitant.

The existing watermain, storm sewers and sanitary sewers will be replaced due to age and deterioration. All service laterals will be replaced to the property line. Reconstruction of the road and concrete surface works is necessary due to deterioration and reconstruction of the underground services.

Can I upgrade my existing sanitary sewer and water service?

All water service laterals for single family homes will be replaced with 25mm diameter polyethylene pipe from the watermain to property line and all sanitary service laterals will be replaced with 100mm diameter PVC pipe from the sewer main to property line.

Any property owner wishing to have new (additional) or larger sized services must make written application to the City of Cambridge. Any new or upgraded service will be at the expense of the property owner making the request. Should you require a new or upgraded service, please contact Scott MacDonald of the Community Development Department at 519-623-1340 ext. 4679 so that your requirements can be incorporated as part of the construction.

Please note that the services installed will be to the property line only. Any work on private property would be the responsibility of the property owner who must obtain a permit under the Plumbing Code from the City's Building Department.

What is the timing of the reconstruction?

Construction is expected to take place in 2025 subject to budget approval.

Who will be doing the work?

A private contractor selected through the City's public tender process will undertake the work.

How will the reconstruction affect me?

During road reconstruction, it will be necessary to close the road to through traffic. Access to private property will be possible most of the time during construction, but it will be at your own risk, as you will be traveling through a construction zone. For times you do not have access to your property, or if you do not wish to travel through the construction zone, alternate arrangements should be made for parking. Overnight parking will be permitted on intersecting streets within one block of the reconstruction but you must abide by all other existing parking restrictions (i.e. don't block a driveway, don't park too close to a fire hydrant, don't park where parking is prohibited, etc.).

How will pedestrian access be maintained?

To minimize disruption to pedestrians, the construction crew will:

- Maintain the existing sidewalk until its removal is absolutely necessary;

- Provide a temporary gravel sidewalk between removal of the old and placement of the new sidewalk; and
- Whenever possible, provide advanced notice to the property owners and residents whose sidewalk or driveway will be temporarily affected.

Will sanitary sewer and water services be interrupted?

Sewer and water service will be maintained throughout the duration of construction. However, short interruptions can be expected, particularly when the services to individual properties are transferred from existing mains to the new mains. In the majority of cases, interruptions will be limited to a few hours and will occur during normal working hours. Advance notification will be provided where possible prior to any planned service interruption. During watermain reconstruction, a temporary above ground watermain will be installed. Each property will be connected to the temporary watermain. Access onto your property may be required to provide the temporary connection.

How will disruptions be minimized?

One issue of critical importance to the City of Cambridge is to have the work completed while minimizing disruption to the neighbourhood. Road reconstruction and underground servicing is disruptive and at times will create noise and vibration due to compaction and a potential for dust. To address these disruptions, water and calcium chloride are used for dust control and construction activity is limited to daylight hours, after 7:00 a.m.

Surface features existing on City property

On some reconstruction projects we find that residents have constructed gardens, shrubs, hedges, and fences within the City road allowance. If existing services are below that particular feature, or there is a grade change, or if the location of the sidewalk changes, you will be asked to relocate the garden, hedge etc. onto your property prior to construction taking place.

When reconstructing the sidewalk, it may be necessary to cut back some driveways to match the new grade. If this is the case, the driveway will be saw-cut and a patch placed using the same material if possible. Impressed or coloured concrete driveways, as well as paving stone driveways, cannot be replaced to match the original (unless the owner has a supply of matching stones that the contractor could use).

If you have a sprinkler system installed along the edge of the roadway or sidewalk within the City's road allowance, you will need to remove the piping prior to construction as the contractor will not be responsible for damage and the City will not replace it. You may have it reinstalled on private property after construction is completed, if you wish.

Will blue box, green box and refuse collection be affected?

Blue box, green box and refuse collection will be maintained throughout the duration of construction. When access is restricted by construction operations, the construction crew will place the various containers at a location accessible by the collection service on collection days. To minimize problems during construction, it would be appreciated if all refuse is bagged – yard waste in paper bags, household garbage in plastic bags. **Please ensure that your address is clearly marked on containers/ blue boxes.**

How can I voice my comments?

The City of Cambridge realizes that reconstruction will cause inconvenience to the residents and businesses in the area and requests your cooperation, understanding and patience throughout its duration. Comments can be provided to the City through a number of avenues:

- City's online engagement platform (www.engagewr.ca/dayton-metcalf-reconstruction). Please note project plans will be **posted online only**. The review and comment period will remain open until December 23rd.
- A comment sheet is attached to this information package and you have the option to mail or e-mail this comment form to the undersigned.

In addition to your comments, other information we would like to receive from residents or institutions are your special needs, e.g. for disabled persons, water or sewer service improvements or driveway modifications. This written record will assist the City to address all the issues related to the reconstruction.

Information in an accessible format

If you require information in an accessible format or accommodation to access municipal services, please contact accessibility@cambridge.ca.
