Greetings,

Reminder: Lead Free Backflow Prevention Devices

We would like to remind installers of the requirement to install lead free backflow prevention devices when the device is provided in connection with a potable water system.

As per CSA-B64.0 - 4.1.3 any device connected to a plumbing system intended to convey or dispense water used for human consumption, through drinking or cooking, shall not contain a weighted average lead content in excess of 0.25% when evaluated in accordance with NSF/ANSI 372.

These devices are typically labelled as “lead free” or may have a serial number with LF included.

Any device installed that does not meet this requirement will need to be replaced with an acceptable approved device. If you have any questions in regards to this requirement please feel free to contact our office at CCCAdmin@cambridge.ca

Regards,

David Durnford | Manager of Building Inspectors
Building Division | Community Development
