

Cleaning a water storage container before use

1. Thoroughly wash the storage container with dishwashing soap and water and rinse completely with clean water.
2. Sanitize the container by adding a solution made by mixing 1 teaspoon of unscented liquid household chlorine bleach in one litre of water.
3. Fully submerge the food grade container and lid in the sanitizing solution for 45 seconds.
4. Let the empty sanitized container air-dry before use OR rinse the empty container with clean, safe water that already is available.
